## Technologies and Architectures

**Front-end:** Javascript, React, HTML, CSS

**Back-end:** Node.js, API, Express, Problem solving

**Microsoft:** Word, Powerpoint, Excel

**Skills currently developing::** AWS, Scala, Python

## Experience

### **Bike Courier** | Capsule

**Jan 2023 - Current**

- **Time management :** Prioritized deliveries based on their urgency and delivery time frames to ensure timely completion of each delivery.
- **Customer service:** Provided a friendly and professional demeanor when interacting with customers, provided updates on delivery status or addressing any concerns.

### **Bike Courier** | Breakaway

**May 2021 - Nov 2022**

- **Package pickup and package sorting:** Organized the packages based on their delivery locations to ensure timely deliveries.
- **Adaptability:** Stayed prepared to handle unexpected situations, such as delays, weather conditions, by making appropriate adjustments to delivery plans.

### **Security Gaurd** | SERA Security

**Nov 2020 - Feb 2021**

- **Incident reporting and documentation:** Maintained accurate records of security incidents, daily activities, and any notable occurrences. Prepared incident reports and security logs.
- **CCTV and surveillance management:** Overseed the operations and maintenance of security equipment. Monitored camera feeds and ensure the proper functioning of the surveillance system.

### **Security Supervisor** | Allied Universal

**Dec 2019 - May 2020**

- **Team supervision:** Managed and supervised a team of security officers, providing guidance and support, and conducting regular performance evaluations.
- **Training and development:** Provided training and onboarding for new security staff, ensuring they are familiar with security procedures and emergency response protocols. .

## Notable Projects

**What are we cooking ?** A web app where users search for recipes or get a random recipe based on meal times. (JavaScript, CSS, API )

- Used Javascript to map through recipes to choose a random recipe for the user.
- Styled with CSS.
- Deployed using GitHub.

**Weather App** A web app used to look up current weather in locations searched.

(JavaScript, CSS,API)

- Used a weather API to collect data to display weather in different locations.
- Made a widget that converted the temperature.

**Change4Change App** A web app used to connect users with charities that incentivize the user by obtaining badges and rewards.

## Education

### Pursuit

Web Development Fellow

**Long Island City, New York**

*September 2022 - December 2023*
